**INNOVATIVE  
POLISHING  
PRODUCTS**

## ***The history of a jewelry tools makers***

***We are a French-Thai company located in Thailand since 1992. Our manufacture of polishing wheels is specialized mostly for the jewelry industry.***

***With 28 years of experience in this field, our products have become the "Leading Brand" in the local market because of the top quality raw materials used and sold at a competitive price point.***

***Our fast growth abroad is due to a simple concept, we provide our customers with the ability to buy our products directly from our manufacturing facility in Asia, with a pricing system that allows you to choose the most appropriate option for your needs. We can fill orders of any size, from a simple sample request (for testing them in your facilities), to very large orders if you wish to become an agent for our brand, or anything in between.***

***We invite you to go through our website and learn more about us, and our products. You can then choose the most appropriate wheel(s), that will perfectly fit your production or customer needs.***

***ADN is looking for the opportunity to serve you in the very near future with our top-quality jewelry tools at very competitive prices.***

***In the meantime, we are here for you for any further information or requests that you might have.***

*These hybrid wheels are made from a mix of the very best raw materials available on the market, this range of wheels will give the polisher the possibility to obtain the exact surface desired due to the different abrasive fiber grits used with the corresponding abrasive cloth.*

*The participation of the abrasive fiber has a minimum role in terms of abrasion, its major effect is to be used as an absorber, which will give you a very smooth polishing, with a great abrasive performance during the removal of smudges even on hard metals. This group of wheels is divided into three range explained down below:*

*Used from grit 80 to 600, these wheels are one of our best sellers due to their great efficiency and competitive price.*

*Used as the S/A, the S/M offers a slightly better result in terms of abrasion and long-lasting.*

*The S/T range is only used for fine grits from 320 up to 1000 grit which will give you a very high quality satin finish.*

**These wheels are used as is, without water of polishing paste.**

**Available in grit : 80 / 100 / 150 / 180 / 220 / 240 / 320 / 400 / 600 / 800 / 1000**

**With the following dimensions (mm):**

**160x25**

**110x25**

**110x12**

**95x20**

**85x6**

**70x12**
